

## Introduction

This pattern is based on the **Depth First Search (DFS)** technique to traverse a tree.

We will be using recursion (or we can also use a stack for the iterative approach) to keep track of all the previous (parent) nodes while traversing. This also means that the space complexity of the algorithm will be  $O(H)$ , where 'H' is the maximum height of the tree.

Let's jump onto our first problem to understand this pattern.
