

## Solution Review: Problem Challenge 2

We'll cover the following ^

- Rotate a LinkedList (medium)
- Solution
  - Code
  - Time complexity
  - Space complexity

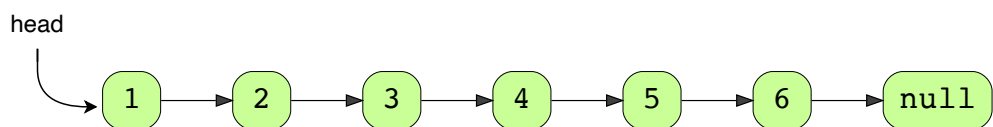

### Rotate a LinkedList (medium) #

Given the head of a Singly LinkedList and a number 'k', rotate the LinkedList to the right by 'k' nodes.

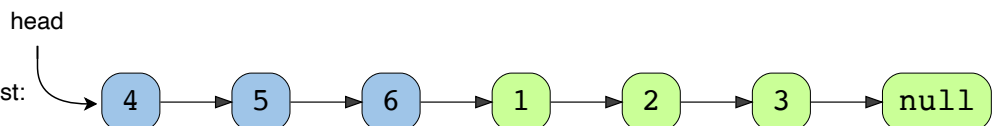

#### Example 1:

k=3

Original List:

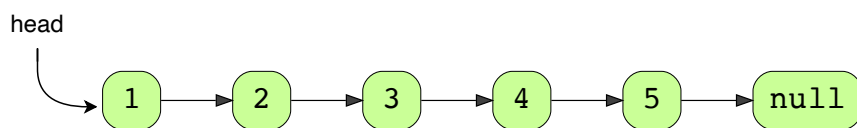

Rotated LinkedList:

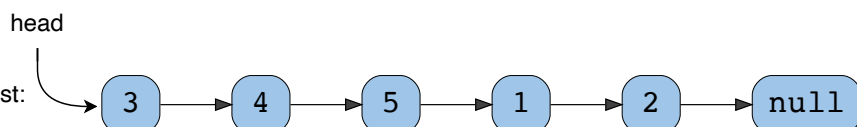

#### Example 2:

k=8

Original List:

Rotated LinkedList:

### Solution #

Another way of defining the rotation is to take the sub-list of 'k' ending nodes of the LinkedList and connect them to the beginning. Other than that we have to do three more things:

1. Connect the last node of the LinkedList to the head, because the list will have a different tail after the rotation.
2. The new head of the LinkedList will be the node at the beginning of the sublist.
3. The node right before the start of sub-list will be the new tail of the rotated LinkedList.

Here is what our algorithm will look like:

Java

Python3

C++

JS

```

1  from __future__ import print_function
2
3
4  class Node:
5      def __init__(self, value, next=None):
6          self.value = value
7          self.next = next
8
9      def print_list(self):
10         temp = self
11         while temp is not None:
12             print(temp.value, end=" ")
13             temp = temp.next
14         print()
15
16
17     def rotate(head, rotations):
18         if head is None or head.next is None or rotations <= 0:
19             return head
20
21         # find the length and the last node of the list
22         last_node = head
23         list_length = 1
24         while last_node.next is not None:
25             last_node = last_node.next
26             list_length += 1
27
28         last_node.next = head # connect the last node with the head to make it a circular list

```

▶

📄

↶

⌂

Time complexity #

The time complexity of our algorithm will be  $O(N)$  where 'N' is the total number of nodes in the LinkedList.

Space complexity #

We only used constant space, therefore, the space complexity of our algorithm is  $O(1)$ .
